

## Conchas Lake, New Mexico

(Project operational in 1939)

The dam is located in San Miguel County, New Mexico, on the Canadian River, just below the confluence of the Canadian and Conchas Rivers.

The dam consists of a concrete gravity main section 1,250 feet long with a maximum height of 200 feet above streambed with earth dikes on each side having an over-all length of about 3.7 miles. The project is located on the Canadian River Canyon.

The dam controls flood waters from a 7,409 square mile drainage area.

Operation of this project is funded under the Operations and Maintenance appropriation.
