

Powers Boulevard, Colorado Springs, Colorado

(Section 14):

The study is located on the east fork of Sand Creek, near Powers Blvd, in Colorado Springs, Colorado. A drop structure protecting Powers Blvd. (US Highway 24) is threatened, in turn threatening the roadway. The study has determined that there is a Federal interest in protecting the road, and a potential streambank protection project has been designed. The project is currently on hold at the local sponsors request. Construction costs are estimated at \$800,000.
