

## Arkansas River Fisheries Habitat Restoration, Pueblo, Colorado

(Construction General - Section 206)

The project is located in the Arkansas River from Pueblo dam to the Fountain Creek confluence. The project will increase diversity and quality of aquatic habitat, improve natural riverine functions, and restore healthy riparian processes. The project will also incidentally enhance recreational, scenic, and natural values in the corridor. Improvements will include instream habitat and channel enhancement structures, grade control structures, and riparian/bank plantings. The local sponsor is the City of Pueblo.

Construction and riparian planting are underway.
