

# Mississippi Headwaters and Red Lake Projects Water Management Considerations for Manoomin Workshops Coming this October!

The US Army Corps of Engineers (USACE) Saint Paul District, USACE Tribal Nations Technical Center of Expertise (TNTCX), and The Nature Conservancy in collaboration with the Sustainable Rivers Program are investigating water management considerations for Manoomin at six headwaters lakes in the Mississippi River Basin: Leech Lake, Lake Winnibigoshish, Pokegama Lake, Sandy Lake, Cross Lake, Gull Lake and Red Lake in the Red River Basin (7 lakes total).

The USACE considers the local Tribes to be an authoritative source of information regarding Manoomin at these projects and seeks collaboration in developing, hosting, and/or implementing the workshops. If you or your staff are interested in joining the workshop planning team or staying informed about the workshops, please contact Brian Zettle at [TEK@usace.army.mil](mailto:TEK@usace.army.mil). Please also share this flyer with other community members, knowledge holders, staff, or council members that may be interested in the project.
