Continuing Authorities Program

Section 205
(Flood Control Act of 1948)
Small Flood Risk Management Projects

At a Glance:
- $10 million federal per-project limit
- First $100,000 of the Feasibility phase is 100% federal cost
- Remainder of the Feasibility phase is cost-shared 50/50
- The Design and Implementation phase is cost-shared at 65% federal and 35% non-federal

The Authority. Section 205 of the Flood Control Act of 1948, as amended, authorizes the U.S. Army Corps of Engineers to study, design and construct small flood risk management projects. The Continuing Authorities Program consists of a suite of standing authorities provided by Congress to fund projects within certain limits without the need to obtain specific congressional authorization for each project.

The Process. A Section 205 project has two phases: Feasibility, and Design and Implementation.

During the Design and Implementation (DI) phase, detailed drawings and descriptions of the project will be developed and the project will be constructed. This phase is cost-shared 65% federal and 35% non-federal.

For structural projects, at least 5% of the cost of the DI phase must be contributed in cash but the remainder can be credit for work-in-kind and, any project lands, easements, rights-of-way, relocations, and disposal sites that the sponsor must provide as items of local cooperation. Should those costs exceed 35% of the total cost, the sponsor must still provide these items in addition to the 5% cash. In addition, the sponsor must agree to operate and maintain the project after completion of construction.

How to Request a Study. If you have a flooding problem that may fit within the Section 205 authority, please contact the Albuquerque District at the phone number below. Our Continuing Authorities Program Manager will be happy to assist you and, if warranted, will visit the site to determine whether or not the problem fits within the Section 205 authority. Upon receipt of a letter of request from a non-federal project sponsor the Corps can initiate the study and request funding.

SAMPLE REQUEST FOR ASSISTANCE

District Engineer
U.S. Army Corps of Engineers, Albuquerque District
ATTN: Civil Works Planning and Project Management Division
4101 Jefferson Plaza, NE
Albuquerque, NM 87109

Dear Sir:

This letter is to request the assistance of the U.S. Army Corps of Engineers under Section 205 of the 1948 Flood Control Act, as amended, in reducing the threat of damages along [name of river, creek, or body of water] in the vicinity of [city or town, etc.].

[Briefly describe the nature and severity of the problem, and any issues that could affect the acceptability of possible solutions.]

We understand that once a project partnership agreement (PPA) is completed, the non-federal sponsor would be required to pay 50% of the feasibility phase costs and 35% of the remaining cost of the project. We understand that we will receive credit for providing lands, easements, rights-of-way, and relocations and for in-kind work, and will be required to provide minimum cash contribution of 5% of the total project cost. We also understand the maximum federal cost for this project is limited to $10,000,000 and that any costs exceeding this amount would be a non-federal responsibility.

We are able and willing to proceed to construction within a year, if a feasible project is identified, and we will accept responsibility for 100% of the operation and maintenance costs of the project upon completion. Please contact [name, address, telephone] for further information.

Sincerely,

[Name and Title of public official authorized to request the study]
