

# U.S. ARMY CORPS OF ENGINEERS REGULATORY PROGRAM APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM) NAVIGABLE WATERS PROTECTION RULE

### I. ADMINISTRATIVE INFORMATION

Completion Date of Approved Jurisdictional Determination (AJD): 23-AUG-2021

ORM Number: SPA-2021-00240

Associated JDs: N/A Review Area Location<sup>1</sup>:

State/Territory: NM City: N/A County/Parish/Borough: San Juan County Center Coordinates of Review Area: Latitude 36.6290 Longitude -107.7642

including There are within the There are area (con There are area (con	varea is comprised entirely of dry land (i.e., there are no waters or water feature vetlands, of any kind in the entire review area). Rationale: N/A or describe ration "navigable waters of the United States" within Rivers and Harbors Act jurisdiction review area (complete table in section II.B). "waters of the United States" within Clean Water Act jurisdiction within the review plete appropriate tables in section II.C). waters or water features excluded from Clean Water Act jurisdiction within the replete table in section II.D).  **rbors Act of 1899 Section 10 (§ 10)²**			
§ 10 Name	§ 10 Size	§ 10 Criteria	Rationale for § 10 Determination	
N/A	N/A	N/A	N/A	
Clean Water		nal Navigable Waters ((a)	(1) waters) <sup>3</sup>	
(a)(1) Name	(a)(1) Size	(a)(1) Criteria	Rationale for (a)(1) Determination	
Territorial Sea (a)(1) Name N/A  Tributaries ((a)	(a)(1) Size N/A )(2) waters):	(a)(1) Criteria N/A	Rationale for (a)(1) Determination  N/A	
Territorial Sea (a)(1) Name N/A	(a)(1) Size N/A	(a)(1) Criteria	Rationale for (a)(1) Determination	

<sup>&</sup>lt;sup>1</sup> Map(s)/Figure(s) are attached to the AJD provided to the requestor.

<sup>&</sup>lt;sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>&</sup>lt;sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>&</sup>lt;sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

**B.** Typical year assessment(s): According to the 2018 National Climate Assessment parts of the Southwest recorded high temperatures in 2012, 2014, 2015, 2016, and 2017 that have not been

<sup>&</sup>lt;sup>1</sup> Map(s)/Figure(s) are attached to the AJD provided to the requestor.

<sup>&</sup>lt;sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>&</sup>lt;sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>&</sup>lt;sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.

# U.S. ARMY CORPS OF ENGINEERS REGULATORY PROGRAM APPROVED JURISDICTIONAL DETERMINATION FORM (INTERIM) NAVIGABLE WATERS PROTECTION RULE

observed since 1895. Increasing temperatures associated with drought and amplified by climate change have led to hydrological droughts in California, the Colorado River Basin, and the Rio Grande.

In the Colorado Basin these conditions have contributed to lower runoff and to 17%-50% of the record-setting streamflow reductions between 2000 and 2014 (USGCRP, 2018). Stream gages within San Juan County are currently reporting normal/below normal flows within the San Juan River and below normal flows within the Animas River (USGS, 2021).

Current and historic conditions in this region are also discussed in a peer reviewed study conducted by Columbia University titled "Large Contribution from Anthropogenic Warming to an Emerging North American Megadrought". The study indicates that the Southwest is experiencing a historic "megadrought" with the last 20 years ranking as the second-driest period in the last 1200 years (A. Park. Williams, 2018).

The National Oceanic and Atmospheric Administration (NOAA) categorizes drought conditions by intensity, and data over the last 20 years indicates that the Albuquerque District has experienced consistent drought conditions throughout this period. Current conditions reflect exceptional drought across an estimated 25% of San Juan County, but conditions are improving (NOAA, 2021). Drought has been prevalent across this region over the last 20 years, and while data indicates a continuing progression towards drier conditions, the current conditions and trend are typical for this region.

C. Additional comments to support AJD: Elevation in the project area is approximately 6000 feet above mean sea level, and the review area receives approximately 8.71 inches of precipitation annually; primarily during the months of July, August, September, and October (WRCC, 2021). Based on aerial imagery of the project area in 2016, 2018, 2019, and a site visit conducted on May 27, 2021, the assessed feature did not exhibit any evidence of seasonal flow. There are no riparian corridors that suggest that water flows more frequently than in response to storm events or that the water table is near the surface for portions of the year.

Based on the review of aerial imagery, climate data, and site observations, this feature appears to flow in response to highly variable precipitation events driven primarily by convection during the summer months. As a result, the Corps has determined that the aquatic resource evaluated as part of this AJD is an ephemeral stream channel. In accordance with 33 CFR 328.3 and the June 22, 2020 implementation of the NWPR, this waterway does not meet the definition of "Waters of the United States" and, therefore, is not currently subject to regulation under Section 404 of the Clean Water Act.

<sup>&</sup>lt;sup>1</sup> Map(s)/Figure(s) are attached to the AJD provided to the requestor.

<sup>&</sup>lt;sup>2</sup> If the navigable water is not subject to the ebb and flow of the tide or included on the District's list of Rivers and Harbors Act Section 10 navigable waters list, do NOT use this document to make the determination. The District must continue to follow the procedure outlined in 33 CFR part 329.14 to make a Rivers and Harbors Act Section 10 navigability determination.

<sup>&</sup>lt;sup>3</sup> A stand-alone TNW determination is completed independently of a request for an AJD. A stand-alone TNW determination is conducted for a specific segment of river or stream or other type of waterbody, such as a lake, where independent upstream or downstream limits or lake borders are established. A stand-alone TNW determination should be completed following applicable guidance and should NOT be documented on the AJD form.

<sup>4</sup> Some excluded waters, such as (b)(2) and (b)(4), may not be specifically identified on the AJD form unless a requestor specifically asks a Corps district to do so. Corps Districts may, in case-by-case instances, choose to identify some or all of these waters within the review area.

<sup>&</sup>lt;sup>5</sup> Because of the broad nature of the (b)(1) exclusion and in an effort to collect data on specific types of waters that would be covered by the (b)(1) exclusion, four sub-categories of (b)(1) exclusions were administratively created for the purposes of the AJD Form. These four sub-categories are not new exclusions, but are simply administrative distinctions and remain (b)(1) exclusions as defined by the NWPR.
