NATIONWIDE PERMIT REISSUANCE REQUEST FOR COMMENTS

On June 1, 2016, the U.S. Army Corps of Engineers published in the Federal Register its proposal to reissue the 50 existing nationwide permits (NWPs) and issue two new NWPs.

Nationwide permits are general permits issued on a nationwide basis to streamline the authorization of activities that result in no more than minimal individual and cumulative adverse environmental effects. Many of the proposed NWPs require notification to the district engineer before commencing those activities, to ensure that the activities authorized by those NWPs cause no more than minimal individual and cumulative adverse environmental effects.

National Issues Concerning the Proposed NWPs: The Federal Register notice is the public’s opportunity to comment on the proposed NWPs, general conditions, and definitions. Comments on national issues relating to these NWPs should be submitted to docket number COE-2015-0017 at www.regulations.gov, or by email to NWP2017@usace.army.mil or by mail to Headquarters, U.S. Army Corps of Engineers, Directorate of Civil Works, ATTN: CECW-CO-R, 441 G Street, N.W., Washington, D.C. 20314-1000. Instructions for submitting comments are provided in the June 1, 2016 Federal Register notice. Comments on the proposed NWPs are due by August 1, 2016.

Regional Issues Concerning the Proposed NWPs, Including Regional Conditioning: Division engineers are authorized to add regional conditions specific to the needs and/or requirements of a particular region or state. Regional conditions are important mechanisms to ensure that the adverse environmental effects of activities authorized by the NWPs are no more than minimal, both individually and cumulatively. Division engineers may also suspend or revoke specific NWPs in certain geographic areas (e.g., states or watersheds) or high-value aquatic systems where the adverse environmental effects caused by activities authorized by those NWPs may be more than minimal. An enclosure for this public notice (Enclosure 2) lists the proposed regional conditions currently under consideration by the South Pacific Division for the Navajo Nation lands. The South Pacific Division is seeking comments on the proposed regional conditions and seeking comments on the need for additional regional conditions to help ensure that the adverse environmental effects of activities authorized by the proposed NWPs are no more than minimal, individually and cumulatively. Unless otherwise noted, all proposed regional conditions listed on this enclosure are applicable for activities on

News Release
Navajo Nation lands. Comments on regional issues relating to the proposed NWPs and proposed regional conditions should be sent to U.S. Army Corps of Engineers, Albuquerque District, Regulatory Division, 4101 Jefferson Plaza NE, Albuquerque, NM 87109 or CESPA-RD-NM@usace.army.mil. Please contact the Albuquerque District at 505-342-3678 or 505-342-3216 for questions regarding the regional conditions on Navajo Nation lands. Comments relating to regional conditions are due by July 17, 2016. Similar public notices proposing regional conditions in other regions or States are being published concurrently by other division or district offices.

After the final NWPs are issued, the final regional conditions will be issued after they are approved by the Division Commander. After the final NWP are issued, States and Tribes will make their Clean Water Act Section 401 (401) water quality certification and States will make their Coastal Zone Management Act (CZMA) consistency determination decisions. The 401/CZMA decisions must be made within 90 days of the Federal Register notice announcing the issuance of the NWPs. The final NWPs will go into effect on March 19, 2017.

Draft decision documents for each of the proposed NWPs, which include environmental documentation prepared for the purposes of the National Environmental Policy Act, have been written by Corps Headquarters. The decision documents will address compliance of the NWPs with the requirements for issuance under the Corps general permit authority. These documents, as well as the proposed NWPs, are available for viewing at www.regulations.gov, docket number COE-2015-0017. Final decision documents will be prepared for the NWPs that are issued. In addition, the final national NWP decision documents will be supplemented by division engineers to address their decisions concerning regional conditions for the NWPs.

Enclosed is an index of the proposed NWPs and conditions. Anyone wishing to provide comments may obtain a full text copy of the NWPs through the Corps Home Page at http://www.usace.army.mil/Missions/CivilWorks/RegulatoryProgramandPermits/Nation widePermits.aspx, at www.regulations.gov in docket number COE-2015-0017, or at the Federal Register, Superintendent of Documents, P.O. Box 371954, Pittsburgh, PA 15250-7954 or call 202-512-1800.

News Release
Regional Conditions Applicable to All Nationwide Permits within the Navajo Nation

1. **Pre-Construction Notification (PCN) for Dredge and Fill Activities in Intermittent and Perennial Streams, Special Aquatic Sites, and Springs.**

   Notification to the District Engineer in accordance with General Condition 32 is required for all proposed activities in intermittent and perennial streams, special aquatic sites (including wetlands, riffle and pool complexes, and sanctuaries and refuges), and discharges of dredged or fill material within 100 feet of the point of groundwater discharge of natural springs. A spring source is defined as any location where ground water emanates from a point in the ground and has a defined surface water connection to another water of the United States. For purposes of this regional condition, springs do not include seeps or other discharges which lack a defined surface water connection.

2. **Suitable Fill**

   Use of broken concrete as fill or bank stabilization material is prohibited unless the applicant demonstrates that its use is the only practicable material (with respect to cost, existing technology, and logistics). Any applicant who wishes to use broken concrete as bank stabilization must provide notification to the District Engineer in accordance with General Condition 32 (Pre-Construction Notification) along with justification for such use. Use of broken concrete with rebar or used tires (loose or formed into bales) is prohibited in all waters of the United States.

3. **Channelization**

   General Condition 9 for Management of Water Flows is amended to add the following: Projects that would result in permanent channelization to previously un-channelized streams require Pre-Construction Notification to the District Engineer in accordance with General Condition 32.
